(a) natural variance vs Haar rank-k
share of natural variance
DAS R_k (120 twins)
random p95
DAS R_k (twins + 40 forced)
k=1
k=2
k=4
k=8
(b) projected-map retention (Makelov)
effect ratio vs R_k (forward, 768 pairs)
retention, 64 PCs of 120 twins
retention, 64 PCs of twins + forced
retention, 100 PCs of 120 twins
residual (orth. to 64 twin PCs)
(c) forward and reverse interchange
DAS effect / full-state swap at block 17
forward recovery (twin <- forced)
reverse, Haar rank-k mean
reverse recovery (forced-BFS <- twin)
